celldxTM provides deep genomic analysis for your patient with advanced cancer.

- **Targeted Therapy** : Evaluation of companion diagnostic therapies across several cancer indications, and clinical trial matching across all solid tumors.
- **Immunotherapy** : Helps inform immunotherapy decisions by including genomic signatures such as microsatellite instability (MSI), tumor mutational burden (TMB) and PDL1 status.
- **Simplified Report** : All results are provided in a simplified report, with indications for approved therapies and genomic highlights.
- 452 Genes (SNVs, CNAs, Fusions and Indels)
- Turnaround time is less than 5-7 working days from the day we receive the tissue sample.
